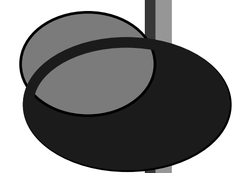
Military

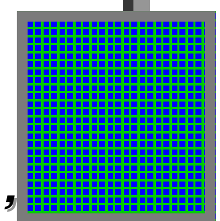
Expected Problems



Query can not specify object precisely

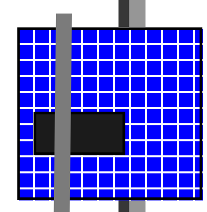
‘*Causes for low unit readiness?*’

(helpful database gets extra stuff)



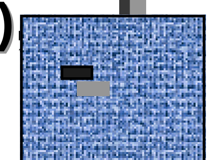
Objects (*N*) are not organized according to all possible access classifications (*a*) = (N^a)

‘*Problems with ship propulsion, but not propellors*’



Some objects cover multiple classes

‘*Units in Persian Gulf?*’



Some objects are misfiled (happens easily to others),

costly/impossible to guarantee avoidance

Intel data in operational mission file
