Rule Processing

Features:

- ***Paranoia:*** **Every applicable rule must be enforced for a query to be successful or a result to be releasable, else process by the security officer (SO)**
- ***Default:*** **If no rule applies rules then process by SO**
- **SO can pass, reject, or edit queries and results**
- **SO may inform customer, mediator will not**
- **All queries and results, successful or not, will be logged for audit**
- **Rules are stored in the mediator, with exclusive security access by the SO**
