Access vs. Security mediation

- ✪ Be helpful to customer
- ✪ Tell cust. re problems, *query may be fixed*
- ✪ Exploit DB meta-data
- ✪ Isolate transactions
- ✪ Ship result to customer

- Be helpful to security off.
- Tell sec.off. re problems, *sec.off. may contact cust.*
- Exploit customer inform.
- Use history of usage
- Ship result to security off. with result description (source, cardinality)

Result: the differences are greater than we imagined initially
