Information-preserving transformation rules for merging heterogeneous schemas

- Define a specific sub-domain in medicine of interest to the hospital(s) participating in TIHI
- Select terms from the UMLS ontology prepared for NLM whichare appropriate to that domain
- Determine mismatches of the standard ontology with usage in the resources used by the participating hospital(s).
- Define rules that will permit accessing these resources so that correct, comprehensive, and consistent results are produced.
- Support SRI mediation technology to achieve that goal
